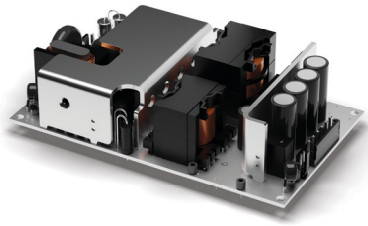
FRIWO

Medical Power Supplies

The heart of Your Application

Solutions for the highest requirements.

FRIWO develops and manufactures reliable power supplies and system solutions from a single source.



FRIWOs Medical Portfolio

- Plug-in Power Supplies
- Desktop Power Supplies
- Open Frame Power Supplies
- Power Delivery Power Supplies
- Chargers
- Battery Packs
- Customised Solutions

Electronic Manufacturing Services (EMS)
with production facilities in Vietnam

Original Equipment Manufacturer (OEM)
customised solutions for your requirements

Heart failure – one of the most feared incidents

Heart failure is one of the biggest challenges for patients and doctors. Just as in a medical emergency, where every second counts, an interrupted power supply in the medical technology sector is a catastrophe.

A reliable power supply is essential to ensure the functionality of medical devices and thus protect the lives of patients.

FRIWO has produced more than a billion power supplies since 1971 and has established itself as a leading provider of high-quality, durable solutions. Our expertise and German engineering ensure that your medical application always runs smoothly - for maximum patient safety.

FRIWO: your reliable partner for power supplies

FRIWO's medical power supply solutions are designed for the most **demanding conditions**. Whether it's ensuring optimum protection against external influences by **encapsulating, partially encapsulating or varnishing** the electronics, protecting the patient by minimising leakage currents of ≤ 10 µA or securing the power supply with additional systems and **battery-supported backup solutions**.

Our approach is always focussed on the needs of the user, which inspires us to develop innovative solutions that make everyday medical life easier.

Many customers rely on FRIWO as a **reliable partner for customised OEM solutions**. From development and production to customisation, we manufacture power supplies that are precisely tailored to specific requirements.

FRIWO stands for **innovative strength, German engineering expertise** and a **deep understanding of the requirements of medical technology**.

ISO 13485 certification: our promise of quality

ISO 13485 certification is a central component of our quality standards and proof of our commitment to medical technology. This internationally recognised standard defines strict requirements for the **quality management system**, which covers all aspects of the development, production and distribution of medical products.

Particular attention is paid to comprehensive **risk management** and **complete documentation**, which not only minimises risks but also ensures **optimum traceability of products and components**. By continuously adhering to these high standards, FRIWO not only ensures the quality of its products, but also enables the long-term and smooth marketing of your medical technology applications - even taking into account future changes in standards or new legal regulations.

With FRIWO, you have a reliable partner who guarantees quality and safety at the highest level.

Let‘s discuss your ideas and projects together!
